Continuation of Substance of Interview including description of the general nature of what was agreed to if an agreement was reached, or any other comments: examiner called to say that a further search had turned up teachings of an organopolysiloxane / organohydrogenpolysiloxane composition as claimed including the molecular bonds of H and Si atoms, and provided patent numbers to applicant for review (Unfortunately, a fire drill later resulted in these copies being emptied with the trash, so the exact numbers are not listed here, but applicant should have them). Several phone calls resulted in an examiner's amendment being agreed to. However, during the final search update, another new reference was found which is being applied. Examiner called and left a message that the examiner's amendment would not be done and a final rejection is being mailed. .
